I enjoy listening to the sattellite radio and all of it's programming. They provide a good service for their customers and I don't feel it should be changed just because the radio people are threatened by them. The instant weather and traffic provide a service to all subscribers, it's nice to know what is going on ahead of time to plan accordingly to get where you are going on time. As a truck driver I have to plan alternate routes if necessary and this service is invaluable to myself and other professionals on the road.
